**General Notes**

Simcom offers this information as a service to its customers, to support application and engineering efforts that use the products designed by Simcom. The information provided is based upon requirements specifically provided to Simcom by the customers. Simcom has not undertaken any independent search for additional relevant information, including any information that may be in the customer’s possession. Furthermore, system validation of this product designed by Simcom within a larger electronic system remains the responsibility of the customer or the customer’s system integrator. All specifications supplied herein are subject to change.

1. Introduction

1.1 Overview

This document gives the usage of SIM7X00 SMS function; customer can get useful information about the SIM7X00 SMS function quickly with this document.

SMS function is provided in AT command format, customer can access these SMS AT commands through UART/USB interface which communicates with SIM7X00 module.

SIM7X00 SMS features:
- Manage SMS storage
- Read, write and delete SMS messages in preferred storage
- Edit SMS message and send it
- Receive SMS message
- Set sending and receiving parameters

1.2 References

The present document is based on the following document:

[1] SIM7X00 Series_AT Command Manual_V1.00

1.3 Terms and Abbreviations

For the purposes of the present document, the following abbreviations apply:

- AT: Attention; the two-character abbreviation is used to start a command line to be sent from TE/DTE to TA/DCE
- CSD: Circuit Switched Data
- DCE: Data Communication Equipment; Data Circuit terminating Equipment
- DCS: Digital Cellular Network
- DTE: Data Terminal Equipment
- DTMF: Dual Tone Multi-Frequency
- EDGE: Enhanced Data GSM Environment
- EGPRS: Enhanced General Packet Radio Service
- GPIO: General-Purpose Input/Output
- GPRS: General Packet Radio Service
- GSM: Global System for Mobile communications
- HSDPA: High Speed Downlink Packet Access
- HSUPA: High Speed Uplink Packet Access
- I2C: Inter-Integrated Circuit
- IMEI: International Mobile station Equipment Identity
- IMSI: International Mobile Subscriber Identity
- ME: Mobile Equipment
- MMS: Multimedia message system
- MO: Mobile-Originated
- MS: Mobile Station
- MT: Mobile-Terminated; Mobile Termination
- PCS: Personal Communication System
- PDU: Protocol Data Unit
- PIN: Personal Identification Number
- PUK: Personal Unlock Key
- SIM: Subscriber Identity Module
- SMS: Short Message Service
- SMS-SC: Short Message Service – Service Center
- TA: Terminal Adapter; e.g. a data card (equal to DCE)
- TE: Terminal Equipment; e.g. a computer (equal to DTE)
- UE: User Equipment
- UMTS: Universal Mobile Telecommunications System
- URL: Uniform resource locator
- USIM: Universal Subscriber Identity Module
- WCDMA: Wideband Code Division Multiple Access
2. SMS Quick Start – Storage

The purpose of this section is to help users to start with SMS storage

2.1 Set Preferred Message Storage

Select memory storages `<mem1>`, `<mem2>` and `<mem3>` to be used for reading, writing, etc. These values will be saved after the module restarts.

<table>
<thead>
<tr>
<th><code>&lt;mem1&gt;</code></th>
<th>String type, memory from which messages are read and deleted (commands List Messages AT+CMGL, Read Message AT+CMGR and Delete Message AT+CMGD).</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>“ME” and “MT” FLASH message storage</td>
</tr>
<tr>
<td></td>
<td>“SM” SIM message storage</td>
</tr>
<tr>
<td></td>
<td>“SR” Status report storage</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><code>&lt;mem2&gt;</code></th>
<th>String type, memory to which writing and sending operations are made (commands Send Message from Storage AT+CMSS and Write Message to Memory AT+CMGW).</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>“ME” and “MT” FLASH message storage</td>
</tr>
<tr>
<td></td>
<td>“SM” SIM message storage</td>
</tr>
<tr>
<td></td>
<td>“SR” Status report storage</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><code>&lt;mem3&gt;</code></th>
<th>String type, memory to which received SMS is preferred to be stored (unless forwarded directly to TE; refer command New Message Indications AT+CNMI).</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>“ME” FLASH message storage</td>
</tr>
<tr>
<td></td>
<td>“SM” SIM message storage</td>
</tr>
</tbody>
</table>

```
AT+CPMS="SR","ME","SM"
```
3. Read SMS

3.1 List SMS Messages from Preferred Store

This command is used to return messages with status value <stat> from message storage <mem1> to the TE. If the status of the message is 'received unread', after this, the status in the storage will be changed to 'received read'.

```
AT+CMGL="ALL"
+CMGL: 1,"STO UNSENT","+10011",145,4
Hello World
OK
```

3.2 Read Message

This command is used to return message with location value <index> from message storage <mem1> to the TE.

```
AT+CMGR=1
+CMGR: "STO UNSENT","+10011",145,17,0,0,167,"+8613800100500",145,4
Hello World
OK
```

3.3 Delete SMS

This command is used to delete message from preferred message storage <mem1> location <index>. If <delflag> is present and not set to 0 then the ME shall ignore <index> and follow the rules for <delflag> shown below.

```
AT+CMGD=1
OK
```

3.4 Write Message to Memory

```
AT+CMGW="13012832788" <CR> (TEXT MODE)
ABCD<ctrl-Z/ESC>
+CMGW:1
OK
```
4. Edit/Send SMS

4.1 Send Message from Scratch

This command is used to send message from a TE to the network (SMS-SUBMIT):

```
AT+CMGS="13012832788"<CR>(TEXT MODE)
> ABCD<ctrl-Z/ESC>
+CMGS: 46
OK
```

4.2 Send Message from Storage

This command is used to send message with location value <index> from preferred message storage <mem2> to the network (SMS-SUBMIT or SMS-COMMAND):

```
AT+CMSS=3
+CMSS: 0
OK
AT+CMSS=3,"13012345678"
+CMSS: 55
OK
```
5. Receive SMS

5.1 New Message Indications to TE

Command AT+CNMI is used to select the procedure how receiving of new messages from the network is indicated to the TE when TE is active, e.g. DTR signal is ON. If TE is inactive (e.g. DTR signal is OFF). If set \( <mt> = 2 \), \( <mt> = 3 \) or \( <ds> = 1 \), make sure \( <mode> = 1 \), otherwise it will return error.

These values will be saved after the module restarts.

<table>
<thead>
<tr>
<th>(&lt;mode&gt;)</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Buffer unsolicited result codes in the TA. If TA result code buffer is full, indications can be buffered in some other place or the oldest indications may be discarded and replaced with the new received indications.</td>
</tr>
<tr>
<td>1</td>
<td>Discard indication and reject new received message unsolicited result codes when TA-TE link is reserved (e.g. in on-line data mode). Otherwise forward them directly to the TE.</td>
</tr>
<tr>
<td>2</td>
<td>Buffer unsolicited result codes in the TA when TA-TE link is reserved (e.g. in on-line data mode) and flush them to the TE after reservation. Otherwise forward them directly to the TE.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>(&lt;mt&gt;)</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No SMS-DELIVER indications are routed to the TE.</td>
</tr>
<tr>
<td>1</td>
<td>If SMS-DELIVER is stored into ME/TA, indication of the memory location is routed to the TE using unsolicited result code: +CMTI: (&lt;mem&gt;,&lt;index&gt;).</td>
</tr>
<tr>
<td>2</td>
<td>SMS-DELIVERs (except class 2 messages and messages in the message waiting indication group (store message)) are routed directly to the TE using unsolicited result code: +CMT:[(&lt;alpha&gt;),(&lt;length&gt;)&lt;CR&gt;&lt;LF&gt;&lt;pdu&gt; (PDU mode enabled); or +CMT:[(&lt;oaa&gt;,[(&lt;alpha&gt;),(&lt;scts&gt; [=(&lt;tooa&gt;,&lt;fo&gt;,&lt;pid&gt;,&lt;dcs&gt;,&lt;sca&gt;,&lt;tosca&gt;,&lt;length&gt; ]&lt;CR&gt;&lt;LF&gt;&lt;data&gt; (text mode enabled, about parameters in italics, refer command Show Text Mode Parameters AT+CSDH).</td>
</tr>
<tr>
<td>3</td>
<td>Class 3 SMS-DELIVERs are routed directly to TE using unsolicited result codes defined in ( &lt;mt&gt; = 2 ). Messages of other data coding schemes result in indication as defined in ( &lt;mt&gt; = 1 ).</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

</tbody>
</table>
7. Conflict AT Commands

Following AT commands cannot be used with SMS AT commands together, they will cause a conflict:

- Call AT Commands.

8. SMS Coding

SMS have TEXT mode and PDU mode

8.1 PDU Mode

In this mode, user can send and receive Chinese SMS and English SMS
It support codes: 7-bit, 8bit UCS2

8.2 TEXT Mode

GSM/WCDMA/TDSCDMA/LTE(CMCC UNICOM):
User can use AT+CSCS set the SMS coding (“IRA”, “GSM”, “UCS2”)
It can send and receive Chinese SMS and English SMS

CDMA/EVDO:
support “IRA” coding, you only can send and English SMS.
And receive Chinese SMS and English SMS.

Note: show Chinese SMS in UCS2 coding.
