Notice
1. Basic Specifications

1.1 Display Specifications

1) Display Mode: Passive Matrix
2) Display Color: Monochrome (Yellow&Blue)
3) Drive Duty: 1/64 Duty

1.2 Mechanical Specifications

1) Outline Drawing: According to the annexed outline drawing
2) Number of Pixels: 128 x 64
3) Panel Size: 26.70 x 19.26 x 1.4 (mm)
4) Active Area: 21.744 x 11.204 (mm)
5) Pixel Pitch: 0.17 x 0.17 (mm)
6) Pixel Size: 0.154 x 0.154 (mm)
7) Weight: 1.54 (g)

1.3 Active Area / Memory Mapping & Pixel Construction
1.4 Mechanical Drawing

Notes:
1. Color: Light Blue & Yellow
2. Driver IC: SSD1306
3. FPC Number: QUT1306P01
4. Interface:
   - 8-bit 68XX/80XX Parallel
   - 3-/4-wire SPI
   - I2C
5. General Tolerance: ± 0.30

</tbody>
</table>

Note 1: All the above voltages are on the basis of “$V_{SS} = 0V$”.

Note 2: When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section 3. “Optics & Electrical Characteristics”. If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate.

Note 3: The defined temperature ranges do not include the polarizer. The maximum withstood temperature of the polarizer should be 80°C.

Note 4: $V_{CC} = 12.0V$, $T_a = 25°C$, 50% Checkerboard.
Software configuration follows Section 4.4 Initialization.
End of lifetime is specified as 50% of initial brightness reached. The average operating lifetime at room temperature is estimated by the accelerated operation at high temperature conditions.

3.3.5.2 **I²C Interface with Internal Charge Pump**

特别提醒(Special Tips): 主板设计务必加电子开关，否则，可能引起漏电流现象。
(When design main board, Please add Electronic Switch circuit, otherwise, will be caused leak current)

**Recommended Components:**
- C1, C2: 1μF / 16V, X5R
- C3: 2.2μF
- C4: 4.7μF / 16V, X7R
- C5, C6: 1μF
- R1: 910kΩ, R1 = (Voltage at IREF - VSS) / IREF
- R2, R3: 47kΩ
- R4, R5: 4.7kΩ
- Q1: FDN338P
- Q2: FDN335N

**Notes:**
- VDD: 1.65~3.3V, it should be equal to MPU I/O voltage.
- Vin: 3.5~4.2V
- The I²C slave address is 0111100b’. If the customer ties D/C# (pin 15) to VDD, the I²C slave address will be 0111101b’.
- * VBAT will be connected to VDD when VCC be connected to external source (12V), R1 should be replaced as **910 kΩ**.
4. Functional Specification
4.1 Commands
Refer to the Technical Manual for the SSD1306

4.2 Power down and Power up Sequence
To protect OEL panel and extend the panel life time, the driver IC power up/down routine should include a delay period between high voltage and low voltage power sources during turn on/off. It gives the OEL panel enough time to complete the action of charge and discharge before/after the operation.

4.2.1 Power up Sequence:
1. Power up V_DD
2. Send Display off command
3. Initialization
4. Clear Screen
5. Power up V_CC/ V_BAT
6. Delay 100ms
   (When V_CC is stable)
7. Send Display on command

4.2.2 Power down Sequence:
1. Send Display off command
2. Power down V_CC / V_BAT
3. Delay 100ms
   (When V_CC / V_BAT is reach 0 and panel is completely discharges)
4. Power down V_DD

Note 13:
1) Since an ESD protection circuit is connected between V_DD and V_CC inside the driver IC, V_CC becomes lower than V_DD whenever V_DD is ON and V_CC is OFF.
2) V_CC / V_BAT should be kept float (disable) when it is OFF.
3) Power Pins (V_DD, V_CC, V_BAT) can never be pulled to ground under any circumstance.
4) V_DD should not be power down before V_CC / V_BAT power down.

4.3 Reset Circuit
When RES# input is low, the chip is initialized with the following status:
1. Display is OFF
2. 128×64 Display Mode
3. Normal segment and display data column and row address mapping (SEG0 mapped to column address 00h and COM0 mapped to row address 00h)
4. Shift register data clear in serial interface
5. Display start line is set at display RAM address 0
6. Column address counter is set at 0
7. Normal scan direction of the COM outputs
8. Contrast control register is set at 7Fh
9. Normal display mode (Equivalent to A4h command)
4.4 Actual Application Example
Command usage and explanation of an actual example

4.4.1 V_{CC} Supplied Externally

<Power up Sequence>

If the noise is accidentally occurred at the displaying window during the operation, please reset the display in order to recover the display function.
<Power down Sequence>

- Set Display Off 0xAE
- Power down V_{CC} (100ms Delay Recommended)
- Power down V_{DD}

V_{DD}/V_{CC} off State

<Entering Sleep Mode>

- Normal Operation
- Power down V_{CC}
- Set Display Off 0xAE
- Sleep Mode

<Exiting Sleep Mode>

- Sleep Mode
- Set Display On 0xAF
- Normal Operation
- Power up V_{CC} & Stabilized (Delay Recommended)
- (100ms Delay Recommended)

External setting

```c

</table>

* The samples used for the above tests do not include polarizer.
* No moisture condensation is observed during tests.

5.2 Failure Check Standard

After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at 23±5°C; 55±15% RH.
6. Outgoing Quality Control Specifications

6.1 Environment Required
Customer’s test & measurement are required to be conducted under the following conditions:
- Temperature: 23 ± 5°C
- Humidity: 55 ± 15% RH
- Fluorescent Lamp: 30W
- Distance between the Panel & Lamp: ≥ 50cm
- Distance between the Panel & Eyes of the Inspector: ≥ 30cm
- Finger glove (or finger cover) must be worn by the inspector.
- Inspection table or jig must be anti-electrostatic.

6.2 Sampling Plan
Level II, Normal Inspection, Single Sampling, MIL-STD-105E

6.3 Criteria & Acceptable Quality Level

8. Precautions When Using These OEL Display Modules

8.1 Handling Precautions

1) Since the display panel is being made of glass, do not apply mechanical impacts such as dropping from a high position.
2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.
3) If pressure is applied to the display surface or its neighborhood of the OEL display module, the cell structure may be damaged and be careful not to apply pressure to these sections.
4) The polarizer covering the surface of the OEL display module is soft and easily scratched. Please be careful when handling the OEL display module.
5) When the surface of the polarizer of the OEL display module has soil, clean the surface. It takes advantage of by using following adhesion tape.
   * Scotch Mending Tape No. 810 or an equivalent
   Never try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent such as ethyl alcohol, since the surface of the polarizer will become cloudy.
   Also, pay attention that the following liquid and solvent may spoil the polarizer:
   * Water
   * Ketone
   * Aromatic Solvents
6) Hold OEL display module very carefully when placing OEL display module into the system housing. Do not apply excessive stress or pressure to OEL display module. And, do not over bend the film with electrode pattern layouts. These stresses will influence the display performance. Also, secure sufficient rigidity for the outer cases.
7) Do not apply stress to the driver IC and the surrounding molded sections.
8) Do not disassemble nor modify the OEL display module.
9) Do not apply input signals while the logic power is off.
10) Pay sufficient attention to the working environments when handing OEL display modules to prevent occurrence of element breakage accidents by static electricity.
   * Be sure to make human body grounding when handling OEL display modules.
   * Be sure to ground tools to use or assembly such as soldering irons.
   * To suppress generation of static electricity, avoid carrying out assembly work under dry environments.
   * Protective film is being applied to the surface of the display panel of the OEL display module. Be protective since static electricity may be generated when exfoliating the protective film.
11) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OEL display module has been stored for a long period of time, residue adhesive material of the protection film may remain on the surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5).
12) If electric current is applied when the OEL display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful to avoid the above.
8.2 Storage Precautions

1) When storing OEL display modules, put them in static electricity preventive bags avoiding exposure to direct sunlight nor to lights of fluorescent lamps. and, also, avoiding high temperature and high humidity environment or low temperature (less than 0°C) environments. (We recommend you to store these modules in the packaged state when they were shipped from Allvision technology Inc.) At that time, be careful not to let water drops adhere to the packages or bags nor let dewing occur with them.

2) If electric current is applied when water drops are adhering to the surface of the OEL display module, when the OEL display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful about the above.

8.3 Designing Precautions

1) The absolute maximum ratings are the ratings which cannot be exceeded for OEL display module, and if these values are exceeded, panel damage may happen.

2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the $V_{IL}$ and $V_{IH}$ specifications and, at the same time, to make the signal line cable as short as possible.

3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit ($V_{DD}$). (Recommend value: 0.5A)

4) Pay sufficient attention to avoid occurrence of mutual noise interference with the neighboring devices.

5) As for EMI, take necessary measures on the equipment side basically.

6) When fastening the OEL display module, fasten the external plastic housing section.

7) If power supply to the OEL display module is forcibly shut down by such errors as taking out the main battery while the OEL display panel is in operation, we cannot guarantee the quality of this OEL display module.

8) The electric potential to be connected to the rear face of the IC chip should be as follows: SSD1306
   * Connection (contact) to any other potential than the above may lead to rupture of the IC.

8.4 Precautions when disposing of the OEL display modules

1) Request the qualified companies to handle industrial wastes when disposing of the OEL display modules. Or, when burning them, be sure to observe the environmental and hygienic laws and regulations.

8.5 Other Precautions

1) When an OEL display module is operated for a long of time with fixed pattern may remain as an after image or slight contrast deviation may occur. Nonetheless, if the operation is interrupted and left unused for a while, normal state can be restored. Also, there will be no problem in the reliability of the module.

2) To protect OEL display modules from performance drops by static electricity rapture, etc., do not touch the following sections whenever possible while handling the OEL display modules.
   * Pins and electrodes
   * Pattern layouts such as the FPC

3) With this OEL display module, the OEL driver is being exposed. Generally speaking, semiconductor elements change their characteristics when light is radiated according to the principle of the solar battery. Consequently, if this OEL driver is exposed to light, malfunctioning may occur.
   * Design the product and installation method so that the OEL driver may be shielded from light in actual usage.
   * Design the product and installation method so that the OEL driver may be shielded from light during the inspection processes.

4) Although this OEL display module stores the operation state data by the commands and the indication data, when excessive external noise, etc. enters into the module, the internal status may...
be changed. It therefore is necessary to take appropriate measures to suppress noise generation or to protect from influences of noise on the system design.

5) We recommend you to construct its software to make periodical refreshment of the operation statuses (re-setting of the commands and re-transference of the display data) to cope with catastrophic noise.

Warranty:

The warranty period shall last twelve (12) months from the date of delivery. Buyer shall be completed to assemble all the processes within the effective twelve (12) months. Allvision technology Inc. shall be liable for replacing any products which contain defective material or process which do not conform to the product specification, applicable drawings and specifications during the warranty period. All products must be preserved, handled and appearance to permit efficient handling during warranty period. The warranty coverage would be exclusive while the returned goods are out of the terms above.

Notice:

No part of this material may be reproduced or duplicated in any form or by any means without the written permission of Allvision technology Inc. Allvision technology Inc. reserves the right to make changes to this material without notice. Allvision technology Inc. does not assume any liability of any kind arising out of any inaccuracies contained in this material or due to its application or use in any product or circuit and, further, there is no representation that this material is applicable to products requiring high level reliability, such as, medical products. Moreover, no license to any intellectual property rights is granted by implication or otherwise, and there is no representation or warranty that anything made in accordance with this material will be free from any patent or copyright infringement of a third party.
